## Behavioural Safety

Behavioural Safety is an approach to workplace safety that focuses on workers' behaviour as the cause of most work-related injuries and illnesses.

The introduction of behaviour-based safety programmes into the culture of an organisation is critical to help deliver sustainable benefits to personal health & safety and to see a reduction in injuries sustained in the workplace.

### For

The course can be adapted to suit all levels but to succeed; it cannot be stressed enough that the upper or senior management must take the lead in achieving the required behavioural changes. This top-down approach means that senior management should be seen to be doing the courses in behavioural safety first too.

### Aims

To ensure that everyone involved recognise their personal responsibilities, are proactively encouraged and challenged, and work within a culture that supports a progressive improvement in all aspects of safety.

### Objectives

At the end of the training session each delegate should be able to:

- Understand their role in a behavioural safety system
- Identify the approach for an effective behavioural safety system
- Participate in their employers behavioural safety system

### Course Content

The syllabus focuses on:

- Accident & Incident Causation
- Root Cause Analysis
- Attitude and Behaviour
- Costs of Poor Safety Performance
- Benefits of Good Safety Performance
- Putting 'ABC' into Practice using the 'STAARR' and 'TASK' Card

### Course Duration

1 day

### Certification

Upon successful completion of the course, attendees will be awarded with a certificate of attendance.
